

COOLANT HOSES

EVOLVING HOSE TECHNOLOGY

Engines become more and more complicated, and so do their coolant hoses. Modern 'modular' hoses branch off to carry coolant to a variety of under-bonnet equipment and typically come as complete assemblies with clamps and connectors mounted on them.

When it's time to change the hose, go for Gates. We design, manufacture and supply a great variety of traditional and modular coolant hoses that **fit and perform exactly like the original**. What is more, you get a complete solution as all our modular hoses come complete with the **OE-exact clamps and connectors to ensure a simple leak-free installation**.

UNCOMPROMISING QUALITY AND DEPENDABILITY

As a pioneering company in high-technology automotive products, Gates has **over 30 years of experience in hose manufacturing** allowing full control of the production process and quality of the product. Every Gates hose **matches the OE in form, fit and function**. The extensiveness of our range ensures you will find the right hose for nearly all of the European car parc.

WHAT CAUSES MODULAR HOSES TO FAIL?

DRIVEN BY POSSIBILITY™
