- Gates warranty protected
- Core expertise in rubber products.
- Continuous Technical support
- Gates has good know-how for market dynamics.

**DRIVEN BY POSSIBILITY™**

# TAKE CONTROL OF NOISE AND VIBRATION AT ITS SOURCE

## PARTS IN DEPTH

When it's time to make decisions about investing in a new range of products, it's good to know that you have the full support of an OE manufacturing brand with a well-established warranty service behind you. Gates specialises in supplying parts that you know you can rely on.

Our new Rubber-to-Metal range features five different product groups. What's more, each one is stocked with parts that are already in demand by garages, while many more about to be.

There is a lot to choose from. The axle and wheel suspension range includes parts such as stabilizer bar rubbers, axle bushings and control arms. Our Engine & Transmission range features engine mounts, gearbox mounts and hydraulic mounts, complete with hydraulic oil chambers embedded, where appropriate. Shock absorber mountings, bearings, bushings and bumpers form the bulk of the suspension range. Parts for exhausts and steering complete the rest of the programme.

## NEW PRODUCT RANGE, 5 PRODUCT GROUPS

**AXLE/WHEEL SUSPENSION, EXHAUST, STEERING,  
ENGINE & TRANSMISSION AND SUSPENSION**

## MATERIAL BENEFITS

Assembly line specifications are the benchmarks for quality for all Gates products. The new Rubber-to-Metal range conforms with this policy in all respects, while the Gates warranty provides an extra layer of protection. Gates want to provide distributors with the confidence they need to invest, while offering installers greater peace of mind when they fit the parts.

As an OE manufacturer Gates ensures that the cast aluminium alloys, steel plates and bearings used are as good if not better than the original quality. The same standards apply to the various grades of rubber shoring used to manufacture various parts across the range.
